Appendix A – Sample course plans
I. Introduction and Program Rationale

This handbook is intended to provide students and other interested persons with a detailed description of the Human Services Psychology (HSP) Program. Combined with the Graduate School catalogue, it should answer most questions that students might have about program requirements. However, students are also encouraged to make generous use of the counsel of their advisors, program directors, and each other in negotiating their way through the program. Others reading this handbook to learn about the HSP Program are also invited to contact the director of the HSP Program if they have any further questions about the program.

Initiated in 1983, the HSP Program represents a reconceptualization of clinical psychology and several related specialties. The program's rationale derives from a general systems theory perspective which focuses on the generic nature of the knowledge and skills upon which these specialties draw and the multidimensional nature of the problems with which they are concerned. We believe that this approach, which is more fully elaborated elsewhere, fosters a more comprehensive and integrative approach to both research and professional practice. It also represents a more cost-effective and flexible approach to professional training than most traditional single-specialty professional training programs since it allows us to provide training for a number of specialties within the framework of a single program.

Human Services Psychology is defined as that sector of professional psychology concerned with the promotion of human well-being through the acquisition and application of psychological knowledge and principles concerned with the diagnosis, treatment, and prevention of psychological and physical disorders. Thus, the program is designed to prepare students to contribute to the growth of knowledge in this area, as well as to apply this knowledge to a broad range of human problems. Consequently, the program is based upon a scientist-practitioner model of training (sometimes referred to as the Boulder Model) which aims to provide students with skills as both researchers and practitioners. We believe that, even though some students in the HSP Program may not plan to follow research careers, it is their training as scientists, as well as practitioners, which most fundamentally distinguishes them from other mental health professionals and human services providers.

The HSP Program uses a biopsychosocial approach as the integrative perspective for its training of human service providers and researchers. There is a commitment in course design and practicum experience to understand the unique contributions of biological, psychological, and social aspects of human functioning as well as the substantial interactions of these three components in almost every problem area addressed by human services psychology. We believe that HSP students should espouse this broader, interactive perspective in designating program interests and developing their graduate program of studies. Thus, the HSP Program encourages a focus on the boundaries of biopsychosocial interactions as well as a solid understanding of each individual aspect in order to promote a more holistic and integrated approach to psychology research, service and practice.

---

II. Program Structure

The HSP Program has an integrative conceptual structure encompassing three specialty components (tracks) in: behavioral medicine; clinical psychology (APA accredited); and community psychology. Within the HSP Program's conceptual framework, these tracks are regarded as differing primarily in their particular focus within the human services matrix and in how they conceive of, and approach, the generic problems of diagnosis, treatment, and prevention of psychological and physical disorders. Thus, Behavioral Medicine (B-Med) focuses on problems involving relations between behavioral and biological levels of human functioning; problems more typically seen in medical settings; and problems related to physical health. Clinical Psychology focuses on problems involving behavioral and psychological functioning of adults, children, and families, and includes assessment and treatment of those problems. Community Psychology focuses on the community settings, social resources, and human services policies that influence the effective functioning of both individuals and communities. As well, though not a formal specialty track, a course sequence emphasizing training in Child Clinical Psychology has also been developed.

We believe the conceptualization of these three specialty tracks within the HSP Program offers students in each program a broader and richer educational experience (and the potential for a more integrative perspective) than they would otherwise receive. In addition, students are encouraged to combine areas of focus. Thus there is training spanning several tracks: Clinical/Behavioral Medicine, Clinical/Community, and Community/Behavioral Medicine. As well, the emphasis in Child Clinical Psychology could also be applied to either of the dual-track training involving Clinical Psychology.

This table presents the organization of the HSP Program and the faculty associated with each of its specialty tracks. Administrative support is provided by the Graduate Program Coordinator, Stephanie Totsch. A listing of the faculty and their current research interests is provided in an appendix to this handbook.

A. Track Placement and Changing Tracks

Placement in one of the three HSP specialty tracks (B-Med, Clinical, Community) or combined tracks is usually determined at the time of admission offers in consultation with the student’s faculty mentor (advisor). Any changing of tracks (described below) assumes the student is in good standing within the program (e.g., moving through the program on a timely basis, successfully passing the Qualifying Examination) and has discussed the change with their advisor. As well, the HSP Faculty may wish to meet and discuss ANY of the following track changes (even if not otherwise specified in the ‘typical’ descriptions below).

**Dropping a track.** A dual-track student, having decided that dropping a track is in their best interest, should undertake the following steps to drop a track: 1) They should meet with, and obtain approval from, the respective directors of each track; 2) A formal letter signed by the student and their advisor should be provided to the HSP Program Director, copying the relevant track directors and advisor; 3) The letter will then be placed in the student's file.

**Adding a track.** In some instances, a student might wish to add a track. This might be because they were initially enrolled in a single track and wish to become dual track. Alternatively, a dual track student may wish to drop one track and add another. Again, the student's first step is to ensure, through discussion with their advisor, that adding a track is in their best interests. The student must also meet with all relevant track directors (director of their current track and of the track they wish to add and director of the track, if relevant). A written request is then prepared and given to the HSP Program Director; copying all relevant track directors and the student's advisor. The request should indicate the student's request has support from their advisor and all track directors (as relevant). The request will then be brought to the full HSP faculty for discussion and a vote on the student's request. **Note:** Because of the highly structured nature of the course sequences in the Clinical track, students who were not initially admitted into the clinical program are not usually allowed to add the Clinical track.

**Switching tracks.** This is tantamount to both dropping and adding a track. Ultimately, the student's request to switch tracks will be voted upon by the full HSP faculty and the student should follow the steps outlined under "Adding a track," above.

B. Applied Behavioral Analysis track in HSP – terminal Master's

An Applied Behavior Analysis track, offered in collaboration with the Kennedy Krieger Institute’s Department of Behavioral Psychology, is also part of the Human Services Program, but is not part of the doctoral training program. HSP doctoral students are welcome to take ABA courses, with ABA instructor permission.

Note: a separate document (ABA Handbook) should be consulted by students enrolled in the ABA terminal Master's program.
III. PROGRAM REQUIREMENTS (HSP DOCTORAL PROGRAM)

All HSP students (regardless of track) take a common core of foundational and research methodology courses. These are referred to as core courses, and are listed below. Beyond these, each track requires a number of specialty courses and several electives and seminars; also listed below. In order to foster the broad, integrative perspective expected of graduates of the HSP Program, students are also required to take at least one cross-track elective from each of the tracks outside their specialty area (see listing of approved cross-track electives in following sections.). In some cases, a student may create a curriculum reflecting a unique combination of tracks. This would be acceptable, as long as a coherent rationale is provided for this combination and it appears to the program faculty to represent a sufficient range and depth of knowledge and skills, and is consistent with APA accreditation criteria for the students in the Clinical Psychology track, if relevant.

The general principle followed in formulating all program requirements is of providing state-of-the-art training in an integrative biopsychosocial model while also allowing a maximum of flexibility and individualized curriculum planning. The goal is to permit students to meet their educational and professional objectives in the most timely and efficient fashion, consistent with accepted national standards for education and training in psychology and with our program's commitment to excellence. Students entering with a baccalaureate degree may expect that, on the average, the program will take the equivalent of 5-6 years of full-time study to complete. This would include a one year internship for clinical psychology students, which is usually taken in the student's fifth or sixth year. The minimum time required to complete the Clinical Psychology track is 5 years—a full-time equivalent of 4 years of study in residency at UMBC and one additional full-time equivalent year of clinical internship.

Changes to the program requirements

Since we constantly seek to improve the HSP Program and keep it responsive to new developments in the field, it is quite possible that program requirements will change during each student's tenure in the program. This includes, but is not limited to: 1) courses will be added or deleted from the curriculum, 2) courses being revised, 3) practicum requirements, and 4) structure of the Qualifying Examination. In no case would subsequent changes in the program requirements be retroactively imposed upon students if the changes would result in lengthening the time required to complete the program (i.e., students may follow requirements at time of matriculation if changes to program requirements are more 'difficult' to achieve).

A. CURRICULUM

Credits listed in parentheses besides each course category are the minimum required for that category. Courses followed by an *, **, or *** are typically taught each year, two years, or three years, respectively. (Note: Course scheduling may change depending on student interest and faculty availability). Students should meet with their advisor prior to each semester to determine what course(s) should be taken in the upcoming semester.

Examples of the general sequence of courses for the each track, track combination, and child focus combination are presented in the Appendix. The first and second year Clinical curriculum has the least amount of flexibility, since students must obtain fundamental clinical training before going on externships. The specific specialty courses, electives, and seminars will vary with the subprogram track elected by students and their particular interests, as will the total number of credits.
1. **HSP Core Course Requirements (9 courses = 28 credits)**

Required of all HSP students unless waived on basis of previous course work

1. PSYC 602 Biological, Cognitive and Developmental Bases of Behavior* (Core I)
2. PSYC 603 Personal, Social, Community and Cultural Bases of Behavior* (Core II)
3. PSYC 608 Human Diversity*
4. PSYC 611 Data Analytic Procedures I* (and lab)
5. PSYC 686 Ethical and Professional Issues in the Science and Practice of Psychology*
6. PSYC 710 Research Methods in Psychology*
7. PSYC 711 Data Analytic Procedures II* (and lab)
8. Methods of Inquiry elective
9. Topics in Diversity (first two semesters; 0 credits)

**Practicum and Research Requirements**

10. PSYC 601 Clinical Training (2 credits)
11. PSYC 690 Practicum (2 credits minimum)
12. PSYC 799 Master’s Thesis Research (6 credits minimum) (billed at ½ rate)
13. PSYC 899 Doctoral Dissertation Research (2 semester minimum—9 credits per semester; billed at 2/9th rate)

2. **Track Course Requirements**

1. **Clinical Track**
   a. **Traditional Clinical (11 courses = 31 credits)**
      1. PSYC 606 Adult Psychopathology*
      2. PSYC 620 Methods of Assessment I*
      3. PSYC 621 Methods of Assessment II*
      4. PSYC 622 Clinical Intervention I*
      5. PSYC 623 Clinical Intervention II*
      6. PSYC 630 Clinical Interviewing (1 credit)*

      **Clinical Electives**
      7. Advanced clinical seminar
      8. Cross-track elective in Community
      9. Cross-track elective in Behavioral Medicine
      10. Other Elective
      11. Other Elective
b. Clinical/Behavioral Medicine (13 courses = 34 credits)
1. PSYC 606 Adult Psychopathology*
2. PSYC 620 Methods of Assessment I*
3. PSYC 621 Methods of Assessment II*
4. PSYC 622 Clinical Intervention I*
5. PSYC 623 Clinical Intervention II*
6. PSYC 630 Clinical Interviewing (1 credit)*

Clinical/Behavioral Medicine Courses and Electives
7. PSYC 695 Introduction to Behavioral Medicine
8. PSYC 695 Physiological Systems in Beh Med
9. PSYC 695 Clinical Intervention III
10. Epidemiology (or another advisor-approved elective)
    (Child clinical students may substitute a child clinical or developmental course)
11. Advanced Behavioral-Medicine seminar
12. Cross-track elective in Community
13. Topics in Behavioral Medicine (first 4 semester; 0 credits)

c. Clinical/Community (13 courses = 34 credits)
1. PSYC 606 Adult Psychopathology*
2. PSYC 620 Methods of Assessment I*
3. PSYC 621 Methods of Assessment II*
4. PSYC 622 Clinical Intervention I*
5. PSYC 623 Clinical Intervention II*
6. PSYC 630 Clinical Interviewing (1 credit)*

Clinical/Community Courses and Electives
7. PSYC 635 Community Psychology I: Theory**
8. PSYC 636 Primary Prevention**
9. PSYC 736 Applied Psychology and Public Policy**
10. PSYC 695 Community Psychology II: Practice**
11. PSYC 695 Program Evaluation**
12. Cross Track Elective in Behavioral-Medicine
13. Topics in Community (first 4 semesters; 0 credits)

d. Child Clinical (11 courses = 31 credits)
1. PSYC 606 Adult Psychopathology*
2. PSYC 620 Methods of Assessment I*
3. PSYC 622 Clinical Intervention I*
4. PSYC 623 Clinical Intervention II*
5. PSYC 630 Clinical Interviewing (1 credit)*

Child Clinical Electives
(Note: the electives follow the same structure as Clinical track but are met with very specific courses to meet the Child Clinical training requirements)
6. PSYC 751 Couple and Family Therapies** (Clinical seminar)
7. Cross-track elective in Community Psychology
8. PSYC 742 Child Health** (Cross track elective in Behavioral Medicine)
9. PSYC 607 Developmental Psychopathology **
10. PSYC 650 Child Clinical**
11. Advisor-approved graduate level Developmental Psychology course
e. Child Clinical/Behavioral Medicine (15 courses = 40-credits)
1. PSYC 606 Adult Psychopathology*
2. PSYC 620 Methods of Assessment I*
3. PSYC 622 Clinical Intervention I*
4. PSYC 623 Clinical Intervention II*
5. PSYC 630 Clinical Interviewing (1 credit)*

Child Clinical/Behavioral Medicine Courses and Electives
(Note: the electives follow the same structure as Clinical/Behavioral Medicine track but are met with very specific courses to meet the Child Clinical training requirements)
6. PSYC 695 Introduction to Behavioral Medicine**
7. PSYC 695 Physiological Systems in Beh Med
8. PSYC 623 Clinical Intervention III
9. PSYC 742 Child Health (Behavioral-Medicine seminar)**
10. Cross-track elective in Community
11. PSYC 607 Developmental Psychopathology ** (substitution for Epidemiology)
12. PSYC 650 Child Clinical**
13. PSYC 751 Couple and Family Therapies**
14. Advisor-approved graduate level Developmental Psychology course
15. Topics in Behavioral Medicine (first 4 semesters, no credits)

f. Child Clinical/Community (15-16 courses = 40-43 credits)
1. PSYC 606 Adult Psychopathology*
2. PSYC 620 Methods of Assessment I*
3. PSYC 622 Clinical Intervention I*
4. PSYC 623 Clinical Intervention II*
5. PSYC 630 Clinical Interviewing (1 credit)*

Child Clinical/Community Courses and Electives
(Note: the electives follow the same structure as Clinical/Community track but are met with very specific courses to meet the Child Clinical training requirements)
6. PSYC 635 Community Psychology I: Theory**
7. PSYC 695 Community Psychology II: Practice**
8. PSYC 636 Primary Prevention**
9. PSYC 736 Applied Psychology and Public Policy**
10. PSYC 695 Program Evaluation**
11. PSYC 742 Child Health (Cross track elective in Behavioral Medicine)**
12. PSYC 607 Developmental Psychopathology**
13. PSYC 650 Child Clinical**
14. PSYC 751 Couple and Family Therapies**
15. Advisor-approved graduate level Developmental Psychology course
16. Topics in Community (first 4 semesters, no credits)
2. **Behavioral Medicine (B-Med) Track (10 Courses = 27 Credits)**
   1. PSYC 649 Foundations of Behavioral Medicine (aka Intro to B. Med)
   2. *PSYC 695 Physiological Systems in Behavioral Medicine*  
      Epidemiology
   4. *PSYC 695 Clinical Intervention III: Interventions in Behavioral Medicine*
   5. Topics in Behavioral Medicine (first 4 semesters, no credits)

**B-Med Electives**
6. Advanced B-Med seminar
7. Advanced B-Med seminar
8. Cross-track elective in Community
9. Cross-track elective in Clinical
10. Other elective

3. **Community Track (11 Courses = 30 Credits)**
   a. **Traditional Community (11 Courses = 30 credits)**
      1. PSYC 635 Community Psychology I: Theory**
      2. *PSYC 695 Community Psychology II: Practice**
      3. PSYC 636 Primary Prevention**
      4. PSYC 736 Applied Psychology and Public Policy**
      5. *PSYC 695 Program Evaluation*
      6. Topics in Community Psychology (first 4 semesters, no credits)

**Community Electives**
7. Advanced Community seminar
8. Cross-track elective in Behavioral Medicine
9. Cross-track elective in Clinical
10. Other elective
11. Other elective

   b. **Community/B-MedTrack (13 courses = 33 credits)**
      1. PSYC 635 Community Psychology I: Theory**
      2. *PSYC 695 Community Psychology II: Practice**
      3. PSYC 636 Primary Prevention**
      4. PSYC 736 Applied Psychology and Public Policy**
      5. *PSYC 695 Program Evaluation**
      6. Topics in Community Psychology (first 4 semesters, no credits)
      7. Topics in Behavioral Medicine (first 4 semesters, no credits)

**Community/B-Med Electives**
8. *PSYC 695 Introduction to Behavioral Medicine*
9. *PSYC 695 Physiological Systems in Behavioral Medicine*
10. Epidemiology (or another advisor-approved elective)
11. *PSYC 695 Social Health Psychology*
12. Advanced B-Med seminar
13. Cross-track elective in Clinical (see below)
Clinical electives include (but are not limited to):

Community Psychology
Primary Prevention
Applied Social Psychology
Public Policy
Advanced Seminars in Community Psychology
(PSYC 695) (Example: Risk & Resilience, Social Health

Note: The following courses contain elements of two different specialty areas, and as such can serve as meeting crossover or advanced seminar requirements for either track. However a single course can only be counted as fulfilling a single requirement.

- Advanced Seminar in Addictive Behaviors may be counted as either a Clinical or a Behavioral Medicine advanced seminar.
- Advanced Seminar in Psychopharmacology may be counted as either a Clinical or a Behavioral Medicine advanced seminar.
- Advanced Seminar in Social Health Psychology may be counted as either a Community or a Behavioral Medicine advanced seminar.

B. Course Waivers and Transfer of Credit

Course waivers (waiver of competency requirements met by the required course). Students entering the HSP Program with advanced standing may be eligible for waiver of particular courses or program requirements. Students who think they may be eligible for course waivers should discuss this with their advisor and ultimately with the instructors of the course(s) to be waived during their first semester. Agreements on waivers should be in writing (forms may be obtained from the GPC; Graduate Program Coordinator), one copy of which will be placed in the student's permanent file and a second given to the student.

Ordinarily, waivers will be granted on the basis of satisfactory completion of comparable coursework done elsewhere. The judgment of comparability in most cases is made by the faculty instructor(s) of the courses involved (if the faculty member is a full-time member of the HSP Program). Waiver of courses taught by part-time instructors or of any other program requirements is granted only by the Director of the HSP Program.
At a minimum, the following conditions should be met:

1. The student must provide a copy of the course syllabus.
2. The course content should be comparable to the course offered at UMBC.
3. The course in question must have been taken within five years of entry into the HSP Program.
4. The course must have been accepted for graduate credit at the school at which it was taken, and the student must have earned at least a grade of B in it.
5. Students pursuing a master’s degree at UMBC cannot waive UMBC research credit requirements.
6. Only credit earned in regularly scheduled, formal courses and seminars will be considered. Credits for independent readings, research, or practica are NOT applicable.

After consultation with their advisor, students may elect to meet some course requirements at other institutions (e.g., take Epidemiology at UM Medical School) while they are a student in the HSP Program. Any courses taken by a student outside the program in which he or she has been admitted requires the informal approval of the faculty mentor and the formal approval of the Director of the HSP Program (there is a specific form that must completed and signed). Note: tuition is only covered at other University System of Maryland (USM) institution. Even at USM institutions, additional fees may apply.

Transfer of credit for such courses taken at other institutions is not required of doctoral students. However, courses approved and accepted by the graduate program must be included on the Graduate Record form at the time of admission to candidacy.

**Transfer of credits external to UMBC**

It is rare, and typically unnecessary, for students who have not already completed a master’s degree to transfer credits to UMBC. Transfer of credits only applies to: 1) courses taken at a USM institution or other regionally accredited institutions and 2) before matriculation to The Graduate School at UMBC. The maximum number of credits that can be transferred is six semester-hours of course work; these credits may apply toward the master's degree earned at UMBC. The same six criteria for waiving courses defined above must be met. Note that earned grades in transferred credits do not contribute to GPA earned at UMBC.

After discussing possible transfer of credit with the advisor and HSP Director, a request for transfer of credit should be completed shortly after matriculation. The Transfer of Credit form (available on The Graduate School Web site) must be approved by the student's advisor and the Graduate Program Director and then submitted to the administrative offices of The Graduate School. Official transcripts of the courses for which credit is requested must be attached to the form and sent to the administrative offices of The Graduate School.
C. Research (Master's, Dissertation, and Independent)

Graduate School forms and deadlines.
Both the Master's and Dissertation degrees require the use of multiple forms available at the Graduate School website (https://gradschool.umbc.edu/graduation/forms/).
Forms should be downloaded from the Graduate School to ensure they are current and up to date. Note: some of the forms have lengthy deadlines (e.g., the Dissertation Examination Committee form must be submitted at least six months in advance).
The Graduate School website also provides deadlines for submission of the approved document, application for graduation, and so forth.

Important: it is ultimately the student's responsibility to keep up with the forms and deadlines. A "how to" document cannot easily be generated as Graduate School policies and deadlines are always subject to change in the future.

1. Predissertation Research Competency Requirement.
All students are required to demonstrate competence in all phases of the conduct of research prior to declaring doctoral candidacy and beginning work on their doctoral dissertation. For students entering the program with bachelor's degrees, this requirement should be satisfied by the end of their second year in the program with the completion of a master’s thesis.

Students wishing to obtain the MA degree should constitute a master's committee (using the Graduate School form) which will approve the research plan and the thesis and conduct the oral examination of the thesis (colloquially, these are the referred to as the proposal and final defenses, respectively). At least one member of the Master's committee should be a member of the HSP faculty. Details of MA requirements can be found on the graduate school website, discussion with your mentor, and through the HSP Program director(s).

Students entering the program with master's degrees may meet the research competency requirement ("waive" the master's thesis) by submitting either a research-based master’s thesis completed at another university or a body of published research with accompanying documentation that the student collectively demonstrated competence in the essential aspects of research demonstrated in a master’s thesis (i.e., literature review, research question conceptualization, design of the study and written description of the method, data analysis (conceptualization and design), data interpretation and discussion) with the level of oversight/supervision typically provided to master’s students in the HSP Program. The thesis or body of work should be evaluated by the student’s HSP advisor and at least one other Psychology Department faculty member.
**Research Competency with existing research.** Students wishing to meet the research competency requirement in this regard (not a traditional Master's earned at UMBC) should discuss their intention to do so with their advisor during orientation, identify a suitable committee member with their advisor’s assistance, and should submit the Research Competency Evaluation form (found on the HSP Blackboard site) and their materials to their advisor and the additional reader **no later than October 1** (of their first year in the program). The reviewing committee should render an opinion on the adequacy of the submitted materials within approximately two weeks, but no later than November 1, so the student knows whether additional work will be needed and can plan accordingly. Possible committee determinations include: 1) Demonstrates research competence; 2) Demonstrates considerable research competency, but requires additional work (e.g., revision of written document, re-analysis of data, execution of an additional component of the research process) before the committee can certify the demonstration of research competency; or 3) Does not adequately demonstrate competency; the student should conduct a new project. New or additional worked needed to demonstrate research competency should be completed by the end of the second year in residence.

**Research Competency with original research.** Students who need to conduct a new project in order to demonstrate competency should follow the same proposal and defense procedures as students completing master’s theses (with the exception of filing forms with the graduate school) and are subject to the same deadlines as students conducting master's theses. Thus, for clinical psychology students, eligibility for practicum placement in their third year is contingent upon their having successfully defended their research competency proposal by February 1 of their second year of full-time residency. Students should plan to defend their proposal well before the February 1 deadline.

A revised HSP Research Competency Evaluation form should accompany the resubmission of the final set of materials demonstrating competency.

2. **Dissertation.**

The doctoral dissertation, demonstrating the student's ability as an independent scholar and scientist, represents an original piece of research. Planning for the dissertation begins with the selection of a dissertation advisor who is knowledgeable about the student's area of research interest and a committee of at least four other members. Close consultation with your dissertation advisor is a key element in the timely development of a successful dissertation proposal. For students entering the HSP Program with the baccalaureate, their fourth year is expected to be the dissertation year. The graduate school requires that students take a minimum of 18 Psyc 899 credit hours; two semesters (PSYC 899 is a fixed, 9-credit course). These PSYC 899 credits would normally be distributed over years 3 and 4. Some students register for PSYC 899 for more than two semesters to defer student loan payments.

Dissertations are expected to be on topics consistent with the goals of the HSP Program and relevant to the student's future career. Beyond this, the program sets no constraints upon either the topics chosen or the methodology used, as long as they are scientifically sound and appropriate to the problem under study. In the same vein, whereas it is normally expected that the dissertation advisor will be a member of the HSP Program, students are free to choose other
department faculty members as their dissertation advisors where this seems appropriate to the
topic they have chosen. However, the dissertation committee should include at least two
members of the HSP faculty. Students in the Behavioral Medicine and Clinical
Psychology/Behavioral Medicine tracks are expected to conduct their dissertation research on a
topic within Behavioral Medicine. Students should consult the Graduate School catalog and web
pages for further details on dissertation requirements.

Beyond the research undertaken to satisfy the predissertation research competence requirement
and the dissertation, students are encouraged to engage in other research projects, either
independently or in collaboration with faculty or other students. This is especially important for
students planning to pursue an academic/research career.

3. ADP and HSP Policy Regarding Theses and Dissertations

It is expected that your theses (M.A. and Ph.D.) are independent projects in which all aspects
reasonably reflect your primary contribution. This includes: idea generation, literature review,
design, data collection, data analysis, and writing. If you plan to seek assistance with the project
that goes beyond consultation with UMBC faculty members or members of the thesis committee,
you should talk with your faculty advisor in advance to verify that the level of assistance you
seek is appropriate. Specifically, unless otherwise arranged with your faculty advisor, it is
expected that all chapters of the thesis (Introduction, Method, Results, and Discussion), and all
relevant work such as data analysis, reflect your independent scholarly contribution.

4. Independent Research and Training in Research

Consistent with the scientist-practitioner model of training upon which the HSP Program is
based, students are expected to be involved in research throughout their graduate careers. This
involvement may take many forms during the course of the student's graduate training, but
common to all students, throughout their careers, is membership in HSP faculty-led research
teams. This research is most typically conceptualized as the research led by your faculty mentor
and/or the research conducted by their lab. These teams provide a collaborative context within
which students gain experience in conceptualizing research questions and in the strategies and
methods of research relevant to their professional interests. Although the faculty member's own
research interests and activities define the general focus of each research team, team meetings
also address the particular research interests of all the team members, covering all aspects of the
research process, including the formulation of research hypotheses, design and conduct of
research, and the analysis and interpretation of results. Team members are also encouraged to
collaborate either with each other or with the faculty team leader in the actual conduct of
particular research projects. Thus, research teams make an important contribution to students'
research training, combining the virtues of an apprenticeship approach to learning with those of
peer stimulation and support.

2 These expectations also apply for students requesting a "Research Competency" evaluation.

3 Obviously, for secondary data analyses, you may not have control over design and/or data collection. As well, it is
understood that aspects of the project may be influenced and/or suggested by your faculty advisor, committee, and
research collaborators.
Not all aspects of work on the research team will lead directly to the student's master's or dissertation projects and this is to be expected of a research-intensive program. If work on the research team is funded (see below), the research also might not pertain directly (or indirectly) to the student's master's or dissertation. The GA Handbook specifically notes:

The duties of RAs vary according to the nature of the research project in which they participate and the source of funding. These duties are performed under the direction and supervision of a faculty member. RAs may or may not be assigned to work on research that is directly applicable to the thesis or dissertation that is part of the requirements for the master's or doctoral degree. In either case, the scholarly activities that are necessary to complete the thesis or dissertation are separate and distinct from the RA and should not be considered part of the 20 hours.

Students are welcome to collaborate on research projects with other graduate students and other faculty members as long as such involvement does not impede student progress and/or notably reduce involvement in the student's own research lab (team). All students who wish to collaborate with other researchers beyond their research team should discuss the opportunities with their faculty mentor prior to such involvement, particularly if it is time intensive.
5. Expectations of student participation in research (adopted May, 2020)

Both the Applied Developmental Psychology and Human Services Psychology graduate programs have a focus on research and are offered at a university designated as R2 (high research activity). As such, doctoral students in both programs are expected to engage in all aspects of research throughout their tenure in the program. Such research should ideally benefit the student in a variety of ways including, but not limited to: a) research publications, b) conference papers and posters, c) training in new methodology and statistics, d) data collection for thesis and/or dissertation, e) training in data management, f) running and organizing a team of undergraduate research assistants, and g) working with and/or establishing community partners.

Faculty should make every effort to clarify research lab tasks and hourly expectations for students prior to admittance to their labs. Ideally, the student would receive some or all of their funding specific to their research activities, but this may not always be possible. If a student receives their graduate assistantship via a TA (teaching assistantship) or other funding source, several things are noted. First, students are expected to continue conducting research though, primarily focused on their thesis and/or dissertation. In no instance can a graduate student, who is otherwise not funded on a research line, be expected to devote more than four hours/week to faculty research projects (above and beyond thesis and/or dissertation). Second, course work, GA responsibilities, and placement should take precedence. Third, it is understood that students may wish to volunteer greater amounts of time to research due to some of the benefits highlighted above, however this is not formally required of non-research funded students and students and faculty are expected to regularly communicate regarding competing demands of student time.

If a student is concerned about the expected amount of time devoted to faculty research, the student is first encouraged to discuss this with the faculty mentor. If the student remains dissatisfied following this discussion, they may reach out to one of several department administrators including, but not limited to: a) their graduate program director (GPD), b) the GPD of a different program in Psychology, c) the department chairperson, d) the department associate chair, or e) the chair of the graduate programs committee. Based on discussion with this person(s) and, depending on resolution, the student may then have their concern brought to the Graduate Programs Committee for further consideration.

Rationale of Policy
The above policy is meant to support student interests and allow faculty to clearly define expectations. This policy is geared to enable students to have a fulfilling graduate school experience while taking into account the various time and energy demands of coursework, research, and assistantships.
D. Practicum
Many of the clinical courses include applied experiences, which provide students opportunities to apply the skills and knowledge presented in the associated course. Students are also required to take a minimum of six credits of practicum, usually in their second and third years. These practica, in various clinical, research, and human services settings, are intended to give students a broader and more integrative experience in the application of the skills and knowledge that they have acquired in the various courses they have taken. *For clinical psychology students, eligibility for practicum placement in their third year is contingent upon their having successfully defended their M.A. thesis proposal, or its equivalent, by February 1 of their second year of full-time residency.* Students should plan to defend well before the February 1 deadline.

Clinical practica are coordinated in partnership with the Director of Clinical Training (DCT); those involving research or other experiences relevant to the Behavioral Medicine and Community Psychology tracks are arranged by their respective directors. In certain circumstances, with the approval of their respective specialty track director, students may arrange their own practica. In any case, for 6 credits (first 2 years of practicum) each student placed on practicum is assigned a faculty preceptor who serves as liaison between the HSP Program and the practicum agency and meets with students on a regular basis to discuss professional and clinical issues that might arise during the practicum and also help students integrate their clinical experience with current theory and research. Clinical track preceptors are assigned by the DCT. Appropriate community and B-med preceptors are identified through student consultation with the advisor and/or track director.

Students should consult with their specialty track director about their practicum preferences early in the semester prior to that in which they wish to begin their assignments. For fall clinical placements, students should not apply until the last Monday of January (for special circumstances, please consult with the DCT). Ordinarily, practicum assignments are made on an academic year basis. Please note: Track directors must approve practicum placements in order for students to be covered by UMBC’s malpractice insurance.

1. Practicum Policies Specific to Students Pursuing Training in the Clinical Track

**Credit and Semester Requirements.** In order to graduate, Clinical track students must complete a minimum of 4 academic semesters of practicum training in which they typically sign up for 1 credit per semester in beginning their second year. The first two semesters of training (PSYC 601) are received at the UMBC Psychology Training Clinic. Subsequent semesters of training (PSYC 690) are under the guidance of an assigned faculty preceptor. Students registering for PSYC 690 will register under the preceptor’s section code for this course (the preceptor will need to grant permission). A minimum of 2 credits of PSYC 690 must be taken after the student has been officially admitted to the Clinical track within the HSP Program (i.e., 2 credits of practicum might be able to be transferred). Once students have received at least 4 semesters of supervised practicum training (PSYC 601 and 690), they have the option of completing additional practicum training as a part of their general program of studies, without enrolling for credits. Regardless of the supervision arrangements and/or professional nature of the work,
practical experience or training in a practicum that is NOT approved by the Director of Clinical Training (DCT) cannot be counted in tabulating hours for internship applications without the written authorization of the DCT.

**Practicum Arrangements.** The typical practicum training experience involves 12-16 hours per week on site. No practicum placement experience should exceed 20 hours per week without written authorization from the student’s faculty advisor and the DCT.

Second-year clinical track (including dual track) students in good standing (see below) begin their training at the UMBC Psychology Training Clinic on **July 1** following their first year in the program under the supervision of Dr. Rebecca Schacht, the clinic director. Dr. Schacht supervises all treatment cases in the clinic.

As the initial practicum site, the clinic is where students begin developing their professional role as a therapist and obtain a foundation for delivering evidence-based care. Treatment plans include components of evidence-based treatments and/or follow a manualized intervention when one is available. Commonly used treatment approaches at the clinic include CBT, ACT, DBT, and motivational interviewing. Opportunities are available for obtaining experience in marital therapy and group therapy. Advanced students may obtain supervision experience by supervising junior students on assessment and treatment cases.

Supervision consists of one individual hour-long meeting per week with the student’s primary supervisor, plus one 90-minute group supervision meeting per week, plus additional consultation as needed. Individual supervision involves a combination of direct observation of the trainee’s work (live or video recorded), review of written reports and records, and review of audio recordings of the trainee’s work. Group supervision consists of didactic presentations and case conferencing. All therapy sessions are audiotaped or videotaped.

A typical caseload is 2-5 clients, which requires 10-16 hours per week of the student’s time. This includes session preparation, face-to-face therapy time, documentation, and supervision. Student clinicians also spend about 1 hour per week helping with the day-to-day operations of the clinic (e.g., returning phone calls, managing files, and conducting brief phone screens of potential clients). Questions about the clinic can be directed to the clinic director, Dr. Rebecca Schacht, at [rschacht@umbc.edu](mailto:rschacht@umbc.edu).

**Off-site practica.** The primary supervisor for all practicum experiences should be a licensed psychologist. With the approval of the DCT in advance, an exception to this requirement can be made such that a licensed physician, social worker, licensed professional counselor, or license-eligible doctoral-level psychologist can provide case supervision or serve as a primary on-site supervisor for a practicum experience.

The expected level of supervision varies by site and the nature of the training experience (e.g., therapy versus assessment). Typically, 1 hour per week of supervision is suggested for every 3-5 hours of direct service contact. At a minimum, students should receive 1 hour per week of supervision. In no case should the level of supervision fall below that required by the Maryland state regulations governing the supervision of psychology associates (unlicensed practitioners of
psychology). Supervision can be provided in a variety of formats, including one-on-one supervision, group supervision, direct observation of the trainee’s work, conjoint work with the supervisor, review of written reports and records, and/or review of audio or video recordings of the trainee’s work. Additionally, as part of our program’s ongoing commitment to ensuring the quality of our graduates, each practicum evaluation must be based in part on direct observation (either live or electronically).

Practicum training experiences should prepare the student for the professional practice of psychology, commensurate with the student’s level of prior training and expertise. Training experiences that are not reflective of professional activities (e.g., being asked to administer psychological tests without scoring and interpreting them) or are not oriented toward the professional practice of clinical psychology (e.g., data management, grant writing, etc.) do not fulfill the expectations of practicum training and should be reported immediately to the preceptor and DCT.

2. Responsibilities for Completing Practicum.

For all psychology practica, students are expected to conduct themselves in a professional manner, consistent with the ethical principles of the American Psychological Association, relevant state regulations governing the practice of psychology, and UMBC/departmental policy. Students are expected to demonstrate competence at a level commensurate with their training and previous experience. In order to document practicum training, all students must:

1) Complete an externship contract that specifies the time commitment, nature of the training experience, and supervision arrangements. This contract must be reviewed and approved by the preceptor (or DCT for non-credit placements) and placed in the student’s file within the first few weeks of the practicum.

2) Obtain a semester evaluation of student performance from the externship supervisor and submit it to the DCT at the end of each semester. Any difficulties in obtaining a semester evaluation from the on-site supervisor(s) should be reported promptly to the preceptor and DCT.

3) Complete a semester evaluation of the externship training experience and submit it to the DCT by the specified due date.

4) Track and record training experiences using a standard tracking form, and submit this record at the end of the practicum training experience. If a practicum experience exceeds two semesters in duration, this tracking form should be submitted at least once annually (typically along with the second semester evaluation of the externship experience).

5) Promptly report any significant ethical, legal, professional, supervisory, or other training concerns that arise on practicum to the relevant departmental supervisor. Normally, the preceptor serves as the first contact for practicum concerns (the DCT in the case of non-credit externships). The DCT should be informed of any substantive problems or concerns that are not readily handled in consultation with the preceptor.
When taking Psychology 690 for credit, the student must complete each of the following additional requirements:
   a) Attend bi-monthly preceptor meetings.
   b) Participate actively in peer consultation and preceptor meeting activities.
   c) Complete assigned 690 readings on supervision and consultation.

E. QUALIFYING EXAMINATION

The qualifying exam takes place annually, over a two-week period, beginning on the third Monday of July. Students should plan their availability accordingly.

Qualifying exam start dates through 2025 are as follows:
   7/19/21; 7/18/22; 7/17/23; 7/15/24; 7/21/25; 7/20/26

In order to sit for the qualifying exam in July, students must have submitted their completed thesis to the graduate school no later than the graduate school deadline for thesis submission for May graduation (usually the last week of April; students should check the grad school calendar for the exact date). Students completing a research competency must meet this same deadline, though they will sit for Quals in the summer of their second year. Specifically, students must have submitted a Research Competency Evaluation Form signed by all research competency committee members certifying that the student has fully demonstrated research competency (i.e., no revisions or additional work is required) by the same Graduate School deadline for thesis submission for May graduation.

The major purpose of the qualifying examination is to assess students’ ability to integrate and apply the knowledge they have acquired in the program. It also serves as a necessary requirement to demonstrate the student is ready to continue their training as a doctoral candidate. The scope of the material covered includes content contained in courses that have already been taken and in reading lists provided by the faculty.

Evaluation of a student's exam may result in one of the following outcomes:

1. *Pass with Distinction.*
2. *Pass.*
3. *Partial Pass.* Student must retake (and subsequently pass) some portion of the exam.
4. *Fail.* The exam must be retaken, if the faculty decides to permit the student to do so. This decision rests upon a complete review of the quality of the student's performance in the program, as well as on the exam. See Evaluations Section below.
Partial Pass. When the HSP faculty decides upon a Partial Pass, they will also stipulate when the unsatisfactory portion of the exam must be retaken. Usually, this will be the following summer during the regularly scheduled qualifying exam time. See below for Clinical track students.

In some cases, where the faculty believes that it would be helpful in arriving at its evaluation of a student's knowledge and competence, it may be possible to schedule an oral examination pertaining to identified components of the exam. This may happen based on faculty decision or following a request of the student.

Failing outcome. If a student fails the Qualifying Examination, the student will work with their faculty mentor on how to proceed. Typically, the student will draft an appeal and submit to the full HSP Faculty. The full HSP Faculty will decide on whether to permit the student to retake the exam, after reviewing in detail the student's performance in the program as well as on the exam. The decision will be made, and the student notified, in mid-late Spring. Should the faculty decide against permitting the student to retake the exam, the student will be given an opportunity to meet with the HSP faculty to discuss whether there were any mitigating circumstances which should be taken into consideration before reporting their decision. If the faculty do not agree with the student's appeal, this will be reported to the Department's Graduate Committee, since this is tantamount to dropping the student from the program. The decision must be approved by the Graduate Committee and ratified by the Department faculty before it is referred to the Vice President for Graduate Studies and Research for official action.

Border line grades. Clinical track students who passed the qualifying exam but earned a borderline grade (a 2 out of 5) on either the: 1) HSP integrative or 2) the History and Systems question will be required to revise and resubmit their answer within 4 weeks of receiving their grades. The revision will be re-evaluated by the respective exam graders to ensure that the student is able to demonstrate competence in the respective content area.

F. Admission to Candidacy

Students officially become candidates for the Ph.D. degree upon acceptance of their application for admission to candidacy by the UMBC Graduate School. The application form for admission to candidacy is available from the Graduate School. It is the student’s responsibility to submit this form promptly when all the requirements for candidacy have been fulfilled. To be eligible for doctoral candidacy within the HSP Program, the student must demonstrate the following with five years of their admission to the HSP Program:

1) complete at least 30 credits of required coursework
2) demonstrate research competency
3) pass the HSP Qualifying Examination.

Passing Quals is typically the last step in the above requirements.

Students are expected to apply for candidacy as soon as they have met the above requirements; neglecting to do so may result in the student not being considering in good standing.

Given the timing of Qualifying Examinations and grading, students will not be able to register in PSYC 899 (see below) in the fall semester immediately following Quals.
1. **Candidacy requirements**
University guidelines require that students be admitted to candidacy within five years of admission to the doctoral program. All students must be in candidacy for at least two semesters before receiving the doctoral degree (including time on internship). Students must complete all requirements for the doctoral degree within **four years** after advancement to candidacy.

G. **INTERNSHIP**
The internship, extending over a full calendar year, is usually taken in the student's fifth or sixth year. Students must pass the Qualifying Examination and successfully defend their dissertation proposal before they may apply for internship. The HSP Program deadline for defending the dissertation proposal is **October 1st** of the year the student intends to apply for internship.

Students in the Clinical Psychology (traditional or any of the dual-track options specified above) are expected to take clinical psychology internships which are either accredited by the American Psychological Association or approved by the HSP Faculty. Students in the Community Psychology and Behavioral Medicine tracks are encouraged, but not required, to take an internship. The internships taken by students in the Behavioral Medicine and Community Psychology tracks will be determined by their particular career goals and the nature of the area in which they plan to specialize. Since internship application deadlines are in the late fall for the next year, students should begin discussing their internship plans with their advisors and track directors in the spring and summer prior to the fall in which they plan to apply for internship.

1. **Forms pertaining to internship**
Two forms available on The Graduate School's website pertain specifically to HSP students in the Clinical track. These are:
1) Certification of Completion of the Clinical Internship and
2) Permission to Participate in Commencement Ceremony Before Completing the Clinical Internship. This form is typically necessary as the majority of internships are not officially completed until after the deadline to apply for graduation.

2. **Maryland residency**
Students who believe they will need to register for courses associated with tuition should investigate the need to declare Maryland residency (see below). This is true **even if** the internship is located in the state of Maryland. In brief, students on internship are NOT considered funded students. Students who are not funded, and are not residents of Maryland, are charged the out-of-state tuition rate.

H. **Colloquia**
Departmental colloquia are considered an integral part of the student's education, even though they do not carry academic credit. Colloquium speakers include visiting psychologists and scientists in related fields, as well as some of our own faculty, who are invited to lecture on their recent research or on particular topics on which they are authorities. The purpose of colloquia is to enrich the offerings of our regular curriculum and to broaden the intellectual horizons of both faculty and students. Thus, students are expected to attend them, even when they are not in their particular areas of interest.
IV. Target Dates and Milestones (adopted June 26, 2018)
All students are assumed to be in good standing which means they are making expected progress in the program, performing adequately in performances and practica, and demonstrating appropriate professional behavioral in their roles of: 1) student, 2) practica, 3) research team responsibilities, and 4) Graduate Assistantship (be this RA or TA). The following table presents the target dates by which students should pass each of the listed milestones in the program.

*Marked departures from this schedule, for which there are not satisfactory explanations, would represent lack of satisfactory progress toward the degree and could jeopardize the student's eligibility for continued financial support and status in the program.*

<table>

</tr>
</tbody>
</table>

Note: For any behaviors requiring a remediation/probationary plan, the letter outlining the plan will outline the time period for completion of the remediation plan/probationary period.
V. Evaluations

A. Evaluation Process

The progress and performance of all students is formally evaluated by the faculty annually, at the conclusion of the spring semester. Evaluations include the following content areas:

a) Academics: Quality of academic achievement in coursework
b) Progress: Timely progress toward the completion of a degree
c) Research: Quality of research and scholarly skills and abilities as reflected through high quality work and participation in research activities
d) Clinical Work: Quality of clinical skills in assessment, diagnosis, therapy and/or consultation as reflected through practicum and internship experiences;
e) Professionalism & Ethics: Professional demeanor in interpersonal relations and professional activities with faculty, peers, and colleagues; Personal behaviors that reflect adherence to APA Code of Ethics.
f) TA/Teaching or RA Performance
g) Misc.: Writing, Health, Personal adjustment
h) Collegiality/Citizenship: Contributions to Department, University or Lab
i) Professional Presentations and publications

Advisors provide students with a written report of these evaluations and also meet with students to discuss the evaluation. Students acknowledge receipt of evaluation feedback by signing the feedback report and indicating whether or not they agree with the faculty feedback. A less comprehensive evaluation is also conducted after the fall semester in order to monitor the progress of first-year students as well as to identify any upper-level students who appear to be having problems that may be potentially serious and should be discussed with them before the end of the academic year. These students are informed of faculty concerns and invited to discuss them with their academic advisors.

The following is the HSP policy regarding grades

1. If a student is doing poorly in a course (i.e., likely to get a C+ or poorer), the problem should be brought to the attention of the HSP faculty so that measures can be taken to provide extra support, writing assistance, recommend remedial tutoring or background courses, etc. Whenever possible, this should be done mid-semester, to maximize opportunities to help the student successfully complete the course.

2. A student who receives a letter grade of C+ in a class will be reviewed by the HSP faculty during the end of semester student evaluations to determine whether remediation or other intervention is needed.

3. The graduate school requires that students maintain a GPA of 3.0 or better. If a student’s cumulative GPA falls below 3.0, the student will be placed on probation at the end of the semester in which the substandard GPA was achieved. (This is one of the options offered routinely by the graduate school. The other options are no action or a warning letter.) The rationale for the more severe consequence is twofold: It communicates the seriousness of the problem to the student and begins an official, automatic graduate school termination process. It also speeds up the process of helping students who do not belong in the graduate program move on to other career paths.
4. If the student’s cumulative GPA does not reach or exceed 3.0 by the end of the subsequent semester, the student will be terminated from the program.
5. Receiving a letter grade of D+ or F in any course is considered to be sufficient grounds for termination from the program.
6. All decisions regarding termination from the program will be decided by the HSP faculty as a whole.

In addition to the evaluation of students' academic (including research) progress and performance, the faculty is also concerned about students' professional development and interpersonal functioning, as specified by the APA guidelines for accreditation of training programs in professional psychology. *Professional development* includes compliance with the Ethical Principles of Psychologists and Code of Conduct (American Psychological Association, 2002), taking responsibility for the prompt and accurate preparation of clinical reports, and fulfilling all other clinical and professional responsibilities in a mature manner, consistent with respect for one's colleagues and for the dignity and welfare of one's clients. In our evaluation of *interpersonal functioning*, we are concerned with behavior patterns suggesting problems that might interfere with the student's effective functioning as a professional psychologist.

Although evaluations are inevitably stressful, students should be assured that the primary purpose of these evaluations is *formative*, to determine how we can be most helpful in fostering each student's progress toward her or his professional goals. Where problems are identified, students are advised of them and an attempt is made to develop a plan of action that will remedy the problem. In those rare cases where a student's continuation in the program may be in jeopardy, the student is advised of this and of the corrective action that would be needed to assure his or her continuation in the program.

**B. CONCERNS, COMPLAINTS, GRIEVANCES**

When students have problems or complaints, they are strongly encouraged to discuss them with (a) their instructors or faulty advisors if the problem or complaint is course- or thesis-related; (b) their faculty advisors, the Director of Clinical Training, and/or the HSP Program Director if the problem involves personal or program issues; and (c) their clinical preceptors and/or the Director of Clinical Training if the problem is practicum- or internship-related. Students also have the opportunity to express their concerns, complaints, or grievances through their elected student representatives who attend the HSP Program meetings.

Although the HSP Faculty and the Psychology department are committed to supporting all students, we recognize that, at times, it may be important to obtain outside consultation and support, and in such cases, we strongly encourage you to seek the support you need. Resources exist within the Graduate School, the Dean’s office, and in the greater UMBC community. We have listed below several resources on campus that might prove valuable for you at various points in your career here. We want to highlight the first name on the list, Stephanie Lazarus, who has agreed to serve the role of ombudsperson through her position in the Office of Human Relations. Stephanie can serve many roles, including mediator and conflict resolver if needed.

4 All students are provided with a copy of the Principles when they enter the HSP Program.

C. Termination Appeal Procedure. In the event that the HSP faculty decides that a student's enrollment in the program should be terminated, the student is informed of this and is given an opportunity to discuss the decision with the faculty, before it is referred to the Graduate Committee of the Department, which reviews the decision and the basis for it. Although the Graduate Committee does not serve as a grievance committee, when a decision to terminate a student is referred to it, the student is informed of this and may submit an appeal or any information which the student believes relevant to the decision to the Graduate Committee. If the Graduate Committee concurs with the HSP faculty decision, this is reported to the full faculty of the Department who must ratify the decision. If the decision is ratified by the faculty, the student is informed of this, and the recommendation to terminate the student's enrollment is forwarded to the Dean of the Graduate School, whose decision is not appealable. However, should the student file a complaint with the Dean, claiming that the Department's decision was arbitrary and capricious, the Dean will evaluate the validity of this complaint before taking final action.
VI. Organizational Plan and Rules of Procedure of the HSP Program

A. Faculty

1. Faculty may affiliate with any of the three doctoral tracks and/or ABA track within HSP. Faculty may affiliate with anywhere from zero to four of the tracks. Specific requirements for Track affiliation are considered below (see Tracks).

2. Faculty who wish to mentor graduate students in the HSP program must be an actively participating member of the HSP program.
   a. Faculty are not required to be a member of the same track(s) their graduate student mentees follow
   b. Students pursuing the Clinical track who are mentored by non-Clinical track faculty often receive informal mentoring from a Clinical track faculty member; this is neither required nor formalized
   c. As appropriate, two (or more) faculty may serve as co-mentors of a graduate student in the program (see HSP Students)
   d. The HSP faculty have a collective commitment to facilitate the education of all program students by providing or arranging mentorship.

3. Active participation includes, though is not limited to, attendance at meetings, grading Qualifying Examinations, rating graduate applications, and interviewing applicants

B. HSP Leadership

1. The HSP Program shall be coordinated by the Director of the Human Services Psychology Program (Director)

2. The Director shall be responsible for representing the HSP Program to the UMBC Graduate School and to UMBC at large

3. In coordination with the Department Chair, the Director shall be responsible for overseeing the HSP Program including courses, evaluations, and graduate student funding

4. By virtue of appointment, the Director shall be a member of the Departmental Graduate Programs Committee (GPC).

5. By virtue of appointment, the Director shall be a member of the Graduate Program Directors; a University-wide committee

6. The Director shall be responsible for hearing and responding to HSP student concerns

7. The Director shall preside over meetings of the full HSP faculty

8. The Director shall maintain and update the HSP Handbook at least every two years

C. Tracks

1. Three formal doctoral level training tracks exist within HSP as well as one informal doctoral level track and a Master's level track
   a. Behavioral Medicine
   b. Clinical Psychology
   c. Community Psychology
   d. Child-Clinical Psychology (informal track)
   e. Applied Behavior Analysis (ABA; Master's level track)
2. Each track shall determine its own track-director and criteria for membership in the track
   a. The Director of Clinical Training (DCT) shall serve as the Clinical track director
   b. It is assumed that members of the Clinical track are license eligible and expected that members devote at least 50% of their professional time to track-related activities.
   c. ABA has its own director, though Child-Clinical does not

3. Doctoral program track directors’ responsibilities shall include:
   a. organizing and holding internal track meetings
   b. apprising the HSP Director of any possible changes to the track requirements
   c. proposing the track-specific courses that should be offered roughly ‘two years’ out

4. Curricular changes
   a. Any proposed changes to the degree requirements in a track (including courses, course sequencing, etc.) must be submitted to the HSP Director (by the track director) at least one month in advance of consideration
   b. All curricular changes are voted upon by the full HSP faculty prior to adoption
   c. Curricular changes that can be perceived as making the degree 'harder' to obtain only go into effect for the HSP students matriculating the immediate Fall after the change

D. HSP STUDENTS
1. All HSP students shall have a mentor (or co-mentor) who is an actively participating member of the HSP faculty
   a. The mentor must be present at HSP meetings to represent the student
   b. The mentor will convey information from the full HSP faculty to the student
   c. HSP students may have a co-mentor who is not affiliated with the HSP Program (assuming they hold the terminal degree in their field) only if they have an actively participating HSP faculty member who also serves as co-mentor

2. The HSP student body may have up to two HSP students who serve as student representatives to the HSP faculty and program (HSP Reps)
   a. Determination of the HSP Rep(s) is controlled by the HSP students
   b. HSP Rep(s) are expected to attend HSP meetings where they shall have voice on all topics other than student business
   c. HSP Rep(s) are excused for all consideration of student business
   d. HSP Rep(s) are also members of the GPC where they shall have voice and vote on items that are non-student related and voice only on curricular changes
   e. HSP Rep(s), in coordination with the Graduate Program Specialist, shall assist in recruitment activities related to Visit Day (aka Interview Weekend)

3. All HSP students shall receive written annual evaluations from the faculty mentor
   a. Where possible, evaluations will also be discussed in a formal meeting
   b. Evaluations will consider multiple dimensions (e.g., academics, progress, professional development) as described in the HSP Handbook
   c. HSP students may receive a mid-year evaluation if there are concerns with any of the evaluative dimensions and/or prior concerns have been resolved
E. MEETINGS
1. The full HSP faculty and HSP Reps (where relevant) shall hold regular meetings
2. Meetings will convened and presided by the HSP Director or Associate Director
3. There shall be at least five meetings in the academic year
   a. A meeting at the beginning of the fall to determine agenda for the year
   b. Two student evaluation meetings (mid-year and end of academic year)
   c. Two admissions meetings (interview and admission)
   d. Typically, the full HSP faculty meets monthly from August through May
   e. HSP Rep(s) do not participate in either the evaluation nor admissions meetings

F. SUB-COMMITTEES
1. Other than track committees, there are no other standing committees within the HSP program
2. Ad hoc committees may be formed as needed to consider curriculum changes, program requirements, admissions processes, recruitment, procedures, or other matters.

G. SELECTION AND SERVICE OF THE HSP DIRECTOR AND ASSOCIATE DIRECTOR
1. The term of the HSP Director shall be two years; there shall be no limit to the number of terms served
2. In the Spring semester of the Director's second year, the residing HSP Director will indicate whether they are willing to serve another term as well as asking for nominations of a new HSP Director (self-nominations or nominations of other faculty)
   a. If more than one faculty member (including the current Director) expresses interest in becoming HSP Director a vote shall be held at the last HSP meeting of Spring
   b. If the current Director is willing to continue serving as Director and no other HSP faculty express interest, there is no formal transition
   c. If the current Director is being replaced by a new Director, the transition of duties will take place on the last day of July of the given year
   d. If no faculty express interest in being Director, the residing Director will consult with the Chair, Associate Chair, and possibly Dean's Office
3. The Director may recruit an Associate Director of the Human Services Psychology Program. Duties and responsibilities of the Associate Director will be decided upon in conversations between the Director and Associate Director. Existing guidelines outlining responsibilities serve as the basis of responsibility, but can be negotiated to optimize individual strengths.

VII. Student Records Policy (for students who graduated after December 2008)

The HSP Program documents and maintains records of each student's education and training experiences and evaluations for evidence of the student's progression through the program, as well as for future reference and credentialing purposes. These records consist of the following: the HSP Plan of Study form (available for download on the HSP Blackboard site), which lists all courses taken, grades, practicum placements and publications, master’s thesis title and committee members, qualifying examination results, date of admission to doctoral candidacy, and dissertation title and committee constellation annual faculty evaluations, externship evaluations, and any records documenting problems in the program and how they were resolved. The Graduate School maintains records of transcripts. HSP records are stored in a locked office and can only be accessed by Department faculty and authorized staff. HSP records will be retained indefinitely following graduation.
Note: Students planning to be licensed at any time in the future should also keep copies of all course syllabi (especially for courses with content that may not be clear from the transcript). Keep in mind that licensing requirements vary from state to state; some states require syllabi documenting courses covering content that is not strictly clinical in nature, such as material covered in Core I and Core II, in addition to Human Diversity, Ethics, and clinical courses.

VIII. Other Concerns and Considerations

A. Accreditation

The HSP Clinical Psychology track has been accredited by the American Psychological Association (APA) since 1990. All students enrolled in the Clinical track, including those taking combined training in Clinical Psychology and other HSP track, fall within the accredited portion of the HSP Program. Contact information for the accrediting body is as follows:

   APA Commission on Accreditation
   750 First Street, NE
   Washington, DC 20002
   Phone: (202) 336-5979

B. Licensure

Licensing laws for the professional practice of psychology vary by state, and therefore it cannot be guaranteed that successful completion of the HSP Program will fulfill all pre-doctoral academic requirements for licensure. It is reasonable to anticipate that completion of the APA-accredited Clinical Track will fulfill the pre-doctoral academic requirements for licensure in most states. (Please note that many states also have post-doctoral requirements for licensure).

In order to determine eligibility for licensure, some states, including Maryland, rely upon the designation of doctoral programs on the National Register of Health Service Providers in Psychology. Both the HSP Clinical Psychology Track and the HSP Community Psychology Track are currently designated on the National Register. Therefore, students who complete either of these programs are likely to meet the pre-doctoral academic requirements for licensure in states that use the National Register designation in their licensing process. Students who plan professional practice careers or hope to become licensed in particular states or regions should consult with the state licensing boards in these areas for further information.
C. NON-DISCRIMINATION POLICY

The HSP Graduate Program does not discriminate in offering equal access to its educational programs and activities, support for degree completion, or with respect to Graduate Assistantship offers, terms and conditions, on the basis of any factors that are irrelevant to the individual’s success in graduate training or the profession, such as an individual’s race, creed, color, religion, sex, gender, pregnancy, ancestry, age, gender identity or expression, national origin, veterans status, marital status, sexual orientation, physical or mental disability, or genetic information. It is an expectation that HSP students and faculty will demonstrate respect for human diversity in all its manifestations, including age, disability, ethnicity, gender, gender identity, language, national origin, race, religion, culture, sexual orientation, and socioeconomic status.

Additional information regarding UMBC’s nondiscrimination policies can be found at: http://humanrelations.umbc.edu/non-discrimination/
Psychology Statement on UMBC Title IX Policy

Title IX is a federal law that guarantees equal access to educational opportunities and prohibits gender- or sex-based discrimination in educational settings. According to Title IX, all forms of discrimination based on “sex (including pregnancy), gender, sexual orientation, or gender identity or expression” are Civil Rights offenses subject to the same kinds of accountability and the same kinds of support applied to offenses against other protected categories such as race, national origin, etc. Discrimination and harassment include sexual and gender-based harassment, sexual violence, sexual exploitation, and sexual intimidation, as well as relationship violence and sex- and gender-based stalking. UMBC policies on Title IX are posted here: https://oei.umbc.edu/. According to this policy, all UMBC faculty, staff, and graduate students (including your instructors and teaching assistants) are considered Responsible Employees. As such, they are required to share any disclosures of sexual assault, domestic violence, relationship violence, stalking, and/or gender-based harassment (regardless of where or when it took place), including the names of involved individuals, with the University’s Title IX Coordinator, Mikhail Kushner oei@umbc.edu or 410-455-2735. Responsible Employees also have a mandatory obligation to report disclosures of or suspected child abuse or neglect (www.usmh.usmd.edu/regents/bylaws/VI/VI150). After this mandatory referral is made, a student’s involvement with Mikhail Kushner and the University Title IX processes are at the student’s discretion.

UMBC’s new Office of Equity and Inclusion (OEI) is open and fully operational, with staff working remotely during this time. QUASI-CONFIDENTIAL REPORTERS MAY SUBMIT REPORTS OF POSSIBLE TITLE IX VIOLATIONS WITHOUT IDENTIFYING INFORMATION. OEI HAS OFFICIALLY LAUNCHED THE NEW ONLINE REPORTING FORM FOR SEXUAL MISCONDUCT AND/OR DISCRIMINATION WHICH PERMITS ANONYMOUS REPORTING BY STUDENTS, FACULTY, AND STAFF.

UMBC’s Counseling Center, the Center for Counseling and Consultation at Shady Grove, University Health Services, and the Women’s Center are all providing remote services remotely at this time. Employees can also seek support through the University’s Employee Assistance Program (EAP).

- To speak with a Counseling Center clinician, call 410-455-2472 and leave a message including your name, email address, phone number, and UMBC ID#. After-hours support, on weekends and between 5 p.m. and 8:30 a.m., can be reached at 410-455-3230.
- The Center for Counseling and Consultation at Shady Grove is accepting new clients. To make an initial appointment on Zoom, call the Front Desk at 301-738-6273 and leave a message. The Receptionist will return your call as quickly as possible to schedule your appointment.
- During the remote instruction period, University Health Services is providing services using phone and video tools weekdays, 8:30 a.m.-5 p.m. Call 410-455-2542 and leave a message, and a provider will contact you.
- Women’s Center professional staff are available for individual meetings and support by phone or video chat. To schedule an appointment, email WomensCenter@umbc.edu. If you are already working with a specific staff member and need to set up additional meetings, feel free to contact that staff member directly.

To file a report: https://oei.umbc.edu/

What this means for you as a student:

- The university cares about you and takes the guarantee of equal access to educational opportunities and prohibition against gender- or sex-based discrimination in educational settings very seriously.
- If you disclose an incident that falls under the examples above to any faculty, staff, or graduate student, they are a “Responsible Employee” and are required to report the incident, along with your name, to the Title IX office. You will not be required to engage with the Title IX office in any way based on this report.
- If you disclose an incident that falls under the examples discussed above to a Quasi-confidential Reporter, they may submit a report to the Title IX office, but will do so without using your name.
  - If you disclose an incident that falls under the examples discussed above to a Confidential reporting source, they are not required to submit a report to the Title IX office.

If you or someone you know has experienced gender- or sex-based discrimination, UMBC is here to help and provides many resources. Please don’t hesitate to contact one of the resources, above.
Inquiries concerning the application of Title IX may be referred to:

mothom1@umbc.edu
D. Professional Behaviors and Expectations

Students are expected to handle all professional commitments in a responsible manner. Professional commitments include:

- Fulfilling TA and RA responsibilities in a timely manner;
- Providing quality and timely clinical or community services, reports, and administrative documentation;
- Attending and actively participating in all classes—which includes arriving on time, being fully prepared for class, completing assignments on time, and refraining from distracting or interfering activities during class (e.g., texting, web surfing or other non-class-related activities); and
- Checking UMBC email regularly and responding to communication about professional responsibilities promptly as appropriate to one’s duties/roles.

Professional development will be evaluated as part of students’ annual evaluations or more frequently if concerns are brought to the attention of the faculty.

E. Stress Management

Graduate education is inherently stressful. This tends to diminish as students move beyond their first year of training, but it is a fact of life that our best efforts cannot fully eliminate. There are some things, however, that students can do that should help them in coping with this stress.

1. Don’t try to face it alone. There is much evidence to suggest that peer support can help buffer the effects of stress. Discovering that you are not alone in your experiences of uncertainty, fear, anger, and so forth, by sharing these with your fellow students, can go a long way toward mitigating their effects. Forming study groups, informal socializing, and discussing your concerns with your fellow students are important ways of gaining peer support and developing a sense of community in the program. We recommend them highly.

2. Turn to the faculty. Remember that the faculty is highly invested in your succeeding in the program. You wouldn't be in the program if the faculty did not believe that you could succeed. Make an effort to become acquainted with the faculty. They can be an important source of support—both informational and personal--and want to be.

3. Know what to expect, and plan for it. There are two peak periods of stress for students in the program. The first is your first year, when you feel overwhelmed by the demands of the program and by the changes that have occurred in your life in entering the program, and the second is when you are preparing for the qualifying exam. To feel anxious during these two periods is normal, although nonetheless uncomfortable. In the case of first-year stress, it can help to get to know some second year students--they survived; find out how and recognize that they are not so different from yourself. Also, in spite of all the work you have, set aside some time for socializing and recreation; these are essential to your mental and physical health.

4. Survival strategies for coping with qualifying exam stress revolve around making adequate preparations for it. Review copies of old quals (which are on file for you) so that you get an idea of level of the difficulty of the questions; join a study group; develop a plan and timetable for covering the reading you plan to do for the exam. And remember that the abilities you need to pass the exam are no different from the ones that have gotten you this far.
5. Maintain some balance between your life as a student and the rest of your life. In particular, if you are married, have a family, or a significant other, make time for them. This is a period of strain for them, just as it is for you; they need your affection and attention to their needs and concerns, just as you need theirs. Remember, your career is only one part of your life, and will mean little without the rest.

6. Check out rumors. Rumors are inevitable and can at times be sources of stress. The best way of dealing with them is by confronting them directly by discussing them with your advisor, specialty program director, or the HSP Program director, in order to learn the facts. The facts are usually less ominous than the rumors that were cast by their shadow.

**F. MANAGING DIFFICULT COURSE CONTENT**

Some of your courses (e.g., Diversity and Ethics) or specific practicum experiences may require you to self-disclose and examine your personal beliefs and values in a class discussion or group supervisory meeting context. Although some of these discussions may be uncomfortable, we believe they are crucial to your personal and professional growth as a psychologist. Please be assured that we strive to create a safe and supportive environment for self-examination in the context of academic inquiry. (We do not require nor do we provide group therapy for our trainees.) If you have any concerns with the nature or content of course discussions, we encourage you to talk with your instructor, advisor, the HSP Director or the Director of Clinical Training.

**G. GRADUATE SCHOOL REGISTRATION POLICIES**

The Graduate School policy is that all graduate students must maintain continuous enrollment. The Graduate School indicates that failure to register for a single semester, without permission of the GPD in advance, is evidence that the student has terminated their enrollment in the program.

All graduate students who are receiving a GA (Graduate Assistantship) must be be registered as full-time students (9 credits/semester); this is true regardless of whether the GA is full-time or part-time. Note: full-time registration is also necessary to defer interest on student loans.

Meeting full-time status is fairly straightforward in the first two years simply by registering for recommended courses. Full-time status is automatically met when registering for PSYC 899 (dissertation research); this course is worth 9-credits and it, alone, constitutes full-time status.

Non-resident GAs (full-time or part-time) are charged tuition at in-state rates. This may affect out-of-state students who need to register for courses while on internship or out-of-state students who elect to forgo funding for any reason. See below on declaring residency.
1. **GRAD 600, 602, and 603**
For students who are GAs, who have not yet declared candidacy, and are intending on registering for fewer than 9 credits, there are GRAD 60x courses that students can consider. Note: these courses are only available for funded GAs. The rationale of these courses is that the duties and responsibilities associated with a GA are both a learning opportunity and a time commitment.

Consider these as "placeholder" courses that have no cost. Specifically, each course counts as a fixed number of credits toward full-time status. They will be listed as 0 credits on the transcript but, for the given semester, they will count for a fixed number of credits. The specific course a student may register in depends on whether they are funded full- or part-time and whether they are attempting to maintain full-time status in the summer (see below)

**GRAD 600.** This course is designed for full-time GAs (20 hours/week) and counts 5 credits toward full-time status. Thus, if a student had planned on registering for 6-credits (not full-time), if they also register for GRAD 600 they will be considered as full-time (11 credits). A GA is considered full-time if they are funded 20-hours from a single source (e.g., department) or if they are funded from different sources (e.g., 10 hours from a grant, 10 hours from the department).

**GRAD 602.** This course is designed for part-time GAs (10 hours/week) and counts 3 credits toward full-time status. Thus, if a student had planned on registering for 6-credits (not full-time), if they also register for GRAD 602 they will be considered as full-time (9 credits)

**GRAD 603.** This course is designed for GAs who are funded in the summer and wish to be considered full-time status; 603 counts 2 credits toward full-time status. To meet full-time status in the summer, a student must register for at least 3 credits. Thus, if a student wishes to meet full-time status in the summer, they would need to also register for at least 1 course credit. The primary reason students wish to be designated full-time in the summer is to retain the FICA-exemption with respect to their summer funding.

**Summary** (taken from website below)
- a) GAs are not billed tuition or fees for GRAD 600, GRAD 601, or GRAD 603;
- b) GAs receive credit towards full-time status from GRAD 600 and GRAD 601;
- c) GRAD 600, GRAD 601, and GRAD 603 are not eligible for financial aid, nor are they considered when determining financial aid eligibility;
- d) GRAD 600, GRAD 601, and GRAD 603 do not appear on transcripts or in the schedule of classes;
- e) GAs should register for their respective course, GRAD 600, GRAD 601, or GRAD 603, for each semester as needed;
- f) GRAD 600, GRAD 601, and GRAD 603 will appear at registration to be for 0 credits. However, GAs are receiving the proper number of credits (3, 5, and 2, respectively);
- g) Class numbers for the GA courses are posted on the Graduate School’s website at [http://gradschool.umbc.edu/funding/assistantships/registration/](http://gradschool.umbc.edu/funding/assistantships/registration/). Students must register for GA courses by class number.
2. Other courses to consider
Five other courses are defined here as the credit value and/or tuition rates are atypical. Three of these are "research" courses (e.g., Master's research) and are associated with a reduced rate of tuition. The other two courses are used to maintain full-time status, but under different circumstances than the GRAD 60x courses. As well, students do NOT need to be GAs to register for these other courses, but DO need to either: a) be on internship or b) have completed internship. The course taken on internship has no tuition.

**PSYC 799.** Master's research. This is a variable credit course (2-9 credits) that is billed at 1/2 the rate of 'traditional' courses. Students should be registered in PSYC 799 in the semester they scheduled their final defense of their Master's thesis. A minimum of 6 credits of PSYC 799 (including the 2 credits in the defense semester) are required. If a student intends to defend their thesis in the spring of their second year, they should begin registering for 2 credits of PSYC 799 in the second semester of their first year.

**PSYC 898.** Pre-candidacy dissertation research. This course is intended for students who: 1) have not declared candidacy and 2) need credits to maintain full-time status (beyond any GRAD 60x courses, as relevant). PSYC 898 is a variable credit course (3-9 credits) that is charged at 1/3 the rate of 'traditional' courses. This course is not required. As noted, it is used to maintain full-time status when the overall credit load is less than 9 credits.

**PSYC 899.** Dissertation research. This is a fixed credit (9 credits) course intended for students who: 1) have declared candidacy and 2) are working on their dissertation. A minimum of 18 credits (two semesters) of PSYC 899 is required. Technically, students should register in PSYC 899 each semester following admission to candidacy. An exception to this requirement of continuous registration is made for Clinical track students on internship.

*For each of the above courses students should register in the section corresponding to their faculty mentor. Permission to register is required by the mentor.*

**PSYC 900.** Psychology Internship course. This is a 0-credit course (that does not cost tuition or fees) that serves to maintain full-time status for the student. This course can only be used if the student is on internship. Though the description indicates this is only for those who have completed the dissertation, this is no longer true. Students on internship, who have taken at least 18 credits of PSYC 899, typically register in this course to avoid paying tuition. Most students register in PSYC 900 each semester they are on internship. Summer registration is not required, though some students register in PSYC 900 to continue to defer loan repayment.

**PSYC 8800.** This is a 1-credit course designed for students who have completed all dissertation requirements except for the final defense (including the internship, if relevant). This course meets the requirement of continuous registration for the semester after internship ends and a short amount of time is needed for the final defense. This course is usually used by students who for some reason are unable to defend their dissertation before the end of their internship or before the end of a post-internship semester (i.e., before day 10 of the subsequent semester). If dissertation research and writing are still being conducted, students should instead register for PSYC 899. Unless Maryland Residency has been previously officially established through the graduate school, this course will be billed at out-of-state tuition rates.
3. **MARYLAND RESIDENCY**

Students who need to register for credits while on internship (even if in-state) and/or students who elect to forgo being a GA yet still register for credits will be billed at out-of-state tuition rates if they are not a Maryland resident.

- **Important:** If you were a Maryland resident when you applied to UMBC, you still need to complete and submit the Residency form to the Graduate school in order to have your residency status in the Graduate School be considered in-state. Do not assume that you will be automatically classified as in-state even if you grew up in Maryland. Information on confirming residency and/or apply for residency is available at: [https://registrar.umbc.edu/services/residency/](https://registrar.umbc.edu/services/residency/)

- If you were not a Maryland resident at the time of your application to UMBC, but received in-state tuition benefits as a GA, you will automatically revert to out-of-state status when you are no longer a designated GA. To avoid paying out-of-state tuition, you must officially establish residency in Maryland; this involves an extensive residency petition process. Students should apply early in their graduate career. See the following link: [https://registrar.umbc.edu/services/residency/](https://registrar.umbc.edu/services/residency/)

**H. CAREER DEVELOPMENT**

The development of your career as a psychologist begins the moment you enter the HSP Program. As important as the knowledge and skills you gain in this program are the relationships you form with your classmates and with the faculty. They represent the beginning of a resource network upon which you will draw for the rest of your career; their value does not cease with the receipt of your Ph.D. Therefore, it is to your benefit to maintain contact with the faculty after you graduate, keeping us informed of your activities and accomplishments.

In this connection, it is also important that you keep the program fully informed of professional activities --e.g., part-time jobs, volunteer work--you engage in while you are still in the program. Although not part of the formal curriculum, these activities also contribute to your professional development and, as such, we consider ourselves responsible for knowing about them. In most cases, it will be the director of your program—behavioral medicine, clinical, community—who should be kept informed of these "outside" activities. **Any activities that could be construed as service delivery must be cleared by the DCT and registered with our malpractice insurance program.**
Beyond these outside activities, there are a number of others in which you can engage which will contribute to your career development. One of these is attending and/or presenting papers or posters at professional meetings. Professional meetings are where you can learn about the very latest developments in the field. And, whether you intend to pursue a professional or an academic/research career, or some combination of the two, this is an activity which will contribute to your socialization as a psychologist and provide you with opportunities to meet and develop relationships with other psychologists, further contributing to your professional resource network. Students who plan to pursue an academic career should also consider obtaining experience independently teaching a course. The department offers structured mentoring for students interested in developing teaching skills. Your advisor can help you determine the best point in your academic program to obtain teaching experience.

From time to time, you will hear of workshops or brief courses concerned with specialized techniques or with specific clinical problems. Occasionally these are free; most often they are not but offer special fees for students. Some of these offerings can supplement the training you receive in this program. Although you can't receive academic credit for these activities, we encourage you to take advantage of them, if you can afford their cost. We would also encourage you, however, to seek the opinion of the faculty about the value of the specific activities you are considering. Finally, we encourage you to consider becoming a student affiliate of the professional organization(s) which seem most closely relevant to your career goals. Which organizations you might join—APA, APS, MPA, EPA, or more specialized groups—and when to join are things we encourage you to discuss with your faculty advisor or program director. With these memberships, again you come in contact with others who will be your future professional colleagues and you also become eligible for reduced subscription rates of journals published by the organization.

**I. Graduate Student Association**

The Graduate Student Association (GSA) represents all graduate students in the University of Maryland Graduate School Baltimore. The GSA is important to you for several reasons. It represents your interests as students, as well as teaching assistants and research assistants. It has a small fund of money from which it makes awards to graduate students to defray the costs of their research and their travel costs to professional meetings at which they may be participating. And it sponsors an annual Graduate Student Research Day, at which there is always an interesting keynote speaker, and students have an opportunity to present posters and papers, and for which they may receive special recognition and cash awards. Joining the GSA gives you an opportunity to meet students in other disciplines and to participate in the functioning of the organization, which
The Psychology Graduate Student Organization (PGSO, pronounced “PIG-so”), was a graduate student-led organization, founded in January of 2011 with the goal of promoting a sense of community among psychology graduate students. With the help of funding from the Graduate Student Association (GSA), PGSO organizes social events, promotes psychology graduate students’ voices on campus, and addresses graduate student needs within the department. All psychology graduate students are invited to participate in PGSO events throughout the year, including the following: the Mentorship Program (first year graduate students are paired with a more advanced graduate student to serve as a mentor); holiday parties (e.g., Halloween party, Ugly Sweater Holiday Party, Winter Social); group fitness and health activities (e.g., group fitness classes at the RAC, hiking, meditation); group soup (graduate students bring in homemade soup to share with other students during the winter months); midterms and finals snacks; and other events such as pizza and game nights. PGSO also collects and distributes helpful information for students, such as a list of local healthcare providers and off-campus housing. PGSO is entirely led by graduate students, so there are many opportunities to be involved with this organization. Being a member of PGSO is easy and gives you a chance to lend your voice to issues that matter to psychology graduate students and take on a leadership role within the department.

*PGSO can be a dynamic organization but it is currently inactive as of Fall 2019*

NKIRU NNWULEZI (2015; Michigan State University). Dr. Nnawulezi aims to improve material and social conditions for gender-based violence survivors who occupy multiply oppressed identities, specifically survivors of color, HIV+ survivors, queer and trans* survivors, low-income survivors, survivors who are homeless or housing insecure, survivors with addiction, and survivors with severe mental illnesses. She currently examines the ecological factors that enhance equity and promote survivor power within organizations across the domestic violence housing system continuum. She is also interested in developing structural interventions that serve as an alternative to current social service systems. Her research program is guided by intersectionality and empowerment theories and actualized through transformative participatory research methods.
